

a

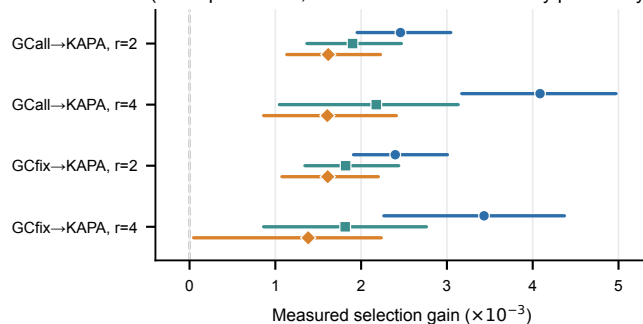

Fixed candidate fibers separate assay selection from payload inversion

b

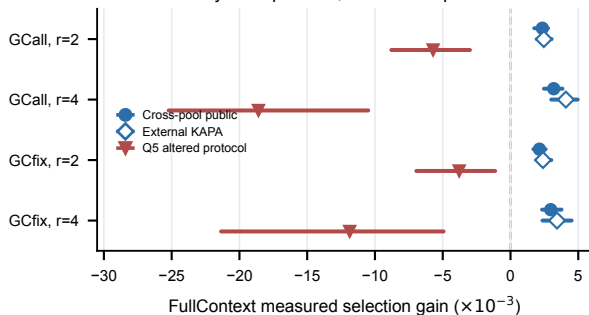

Cross-pool benchmark on identical fibers
(released CNN regression prediction)

c

Analysis-plan-locked external KAPA benchmark
(same publication; released CNN low-efficiency probability)

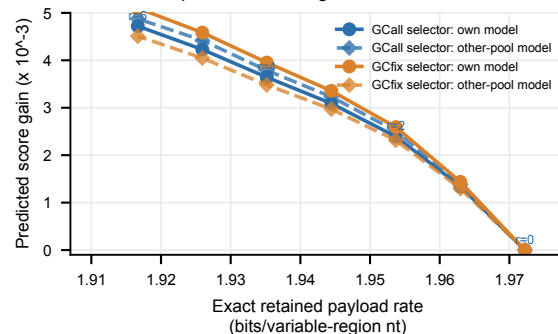

d

Matched assays are positive; Q5 altered protocol reverses

e

Generated predicted score gain has an exact rate cost

Panels b–d: retrospective measured selection; panel d contrasts matched assays with exploratory Q5 transfer. Panel e: generated model scores only; no emitted-codeword PCR experiment.
