

a

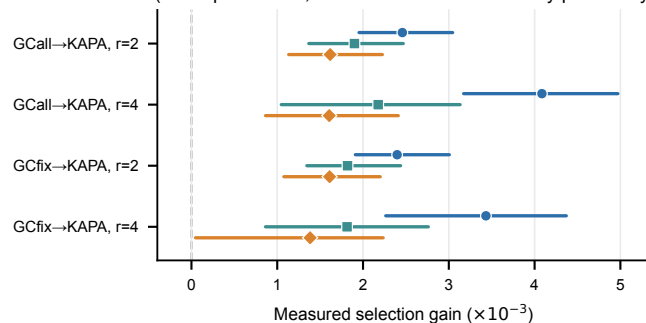

Fixed candidate fibers separate assay selection from payload inversion

b

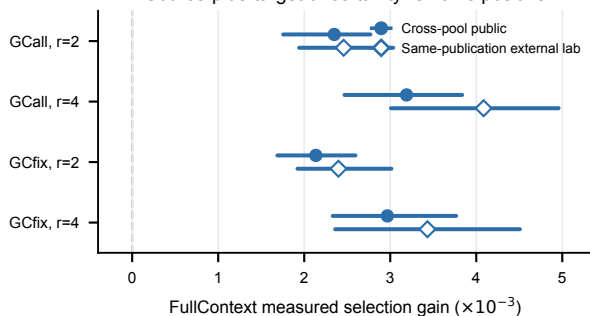

Cross-pool benchmark on identical fibers
(released CNN regression prediction)

c

Analysis-plan-locked external KAPA benchmark
(same publication; released CNN low-efficiency probability)

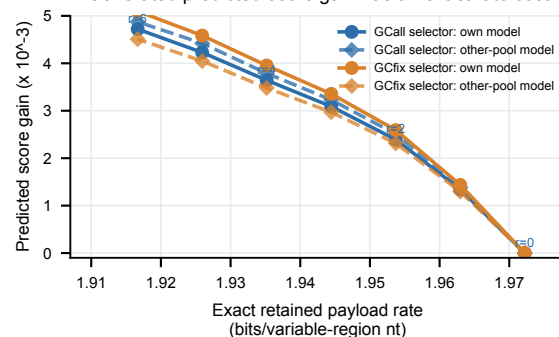

d

Source-plus-target uncertainty remains positive

e

Generated predicted score gain has an exact rate cost

Panels b–d: retrospective measured selection; external KAPA is from the same source publication. Panel e: generated model scores only; no emitted-codeword PCR experiment.
